FUNBRAIN.COM

Funbrain.com gives students the opportunity to get extra practice on certain skills they might be struggling on. Students enjoy this fun opportunity to learn because at the same time, they are also playing a game and competing to see how well they can do. Video games are a favorite hobby of many students, so we thought we would take that idea and run with it. Since they like to do it in their leisure time, we thought we could include games in their learning time as well

and make them more interested in building up their skills. Some of the games we offer in the math section of Funbrain.com include: Math Baseball, Tic Tac Toe Squares, Mathcar Racing, Power Football, Line Jumper, and many, many more. The founders of this great site definitely believe in the saying, "Who says learning can't be fun?" We believe if you visit our site, you will come away feeling the same way.
