

# Mathplayground.com

Mathplayground.com is an online math learning website for students. It has math for all grades and levels. It includes games, skills, and video tutorials.

The website is pretty easy to get around.

There is a list of options on the left and also a very informative "about" section.

The only downfall of this website is that it is kind of busy. There is a lot of advertising, which could affect how the student pays attention to learning.

## Uses:

- Introduce a new concept
- Review
- Study tool
- Time filler activity
- Self-competition (beat past scores)
- Practice, practice, practice difficult areas of math
