# Open Office

Open Office is a great program. It is a free program with lots of great features. It works like many of the other office packages. It comes in many different languages, and has many different features including drawing, writing, graphics, etc...

This is the spread sheet program it is so easy to use and simple. In my opinion much easier than the micro spread sheet program. It looks great and it's free,

It is very simple to use and the web-site does a great job of walking you through the steps of how to use the programs and how to install it on your computer.

Graphic: it's really simple and easy to use. It allows you to let out your artistic side and share your work.

This is an example of the writing program with open office. It is very comparable to micro soft word. Very easy to work with!
